Handheld Announces Major Upgrade to the Algiz 8 Rugged Tablet Computer

Processor, hard drive, RAM and screen all benefit

CORVALLIS, Ore.—April 14, 2009— Handheld US, a supplier of rugged mobile computers, announced today a major upgrade of its Algiz 8 tablet computer. The upgrades include a faster processor, a brighter outdoor viewable display, a 50% increase in the standard hard drive capacity and a 100% increase in the standard RAM memory.

The new version of the Algiz 8 has the new Intel 1.1 GHz ATOM processor. The new ultra-low voltage processor will improve both performance and battery life. The Algiz 8's optional outdoor viewable display has been upgraded to a new screen with brightness of more than 1100 nits. The size of the standard shock mounted hard drive has been increased from 40 GB to 60 GB, and a solid state flash drive is available as an option. And the RAM has increased from 512 to 1024 MB.

“The changes to the Algiz 8 make a great product even better. The combination of a faster processor, longer battery life, and a brighter screen all directly impact and improve the user's experience in the field.” said Dale Kyle, president of Handheld US. “We believe that the Algiz 8 will continue to be the field worker's first choice.”

The new Algiz 8 is available immediately.

About Handheld:

Handheld US is a North American distributor of rugged PDAs and handheld computers. Handheld US and its partners deliver complete mobility solutions to businesses in industries such as logistics, forestry, public transportation, construction, military, and security.
